Good News from France on HCQ for COVID-19

President Trump heralds the medication hydroxychloroquine (or HCQ) for COVID-19, while reporters claim it’s dangerous. But it’s been used for 70 years so how dangerous can it be? One physician reports treating 699 symptomatic patients with great results. Yet many pharmacies refuse to dispense it even with a prescription.

Recently, two small studies of hospitalized COVID-19 patients found it didn’t help them or it hurt them. Perhaps they started the treatment too late. A larger French study found that patients treated with HCQ for three days, soon after COVID-19 symptoms began, had about two-thirds less chance of dying than those who didn’t take the medication. So talk to your doctors sooner rather than later if you feel sick.

“French study finds hydroxychloroquine doesn’t help patients with coronavirus,” Dr. Minali Nigam and Elizabeth Cohen, CNN, April 15, 2020: https://cnn.it/3bNu4lI
